

Manuscript Format

All manuscripts should follow the following format:

Title, Abstract: The title and the abstract of the article should be concise and should reflect the content of the paper accurately. The abstract should be approximately 200 words and should be able to stand alone as a summary of the paper, its arguments and its conclusions.

Sectional headings: Papers should be divided into sections, described by *short* headings; secondary and tertiary sections may also be used, each with *short* headings. No further subdivisions may be used.

Figures: All figures should be submitted as TIFF (photographs), JPEG (photographs) or EPS (charts & graphs) files, saved at 600 dpi for artworks (charts & graphs) and 300 dpi for photographs. The figures should be saved at full size. Do not include any text that you do not want to appear on the final figure. Line drawings must be made with strong black lines, with lettering of sufficient size to be legible. Avoid gross disparities in sizes of lettering. Captions should be listed consecutively, double spaced, in a separate WORD or RTF file. Figures must be referred to in the text by their number in Arabic numerals (for example, 'Figure 1').

Tables: Tables must be typed one per page, preferably in the same word-processing program as the main text of the paper or in a spreadsheet program such as MS Excel. They should be capable of fitting onto a single page of the journal in portrait format. If the table does not fit easily on a single page, the table must be split into Parts A and B. They must be numbered in Arabic numerals and referred to in the text by their number (for example, 'see Table 2').

Manuscript Style

Spelling: Spelling in each paper must be internally consistent, using spelling according to English or Canadian rules.

Abbreviations and acronyms: When used, the full wording must be used on the first mention, followed by the abbreviation or acronym in parentheses. Accepted abbreviations are used for units of measurement.

Units of measurement: Each paper must be internally consistent, using metric units following the International System of Units.

Acknowledgments

The authors may wish to thank the people that helped with the experiments, research or provided funding in order that the manuscript be published.

Nomenclature

BHP - Bottomhole Pressure
 μ - viscosity

References

References in the text are made by endnote. If material is quoted directly, the page number on which it is found must be included in the citation. For personal communications, the initials and last name of the source, the title or position of the source, and the date of the communication should be given.

In the 'References' section, citations should be arranged in numerical order, and preferably in date order for a series of papers by the same author(s). In the case of various combinations of a group of authors, alphabetical order by second author should take precedence over date order. Journal titles must be completely spelled out, and the first letter of each key word is capitalized. For articles or books, the first letter of each key word is capitalized. Authors are responsible for the accuracy of the references. If a reference is found to be incorrect, the author is responsible for providing the correction, or the paper cannot progress for publication.

Works accepted for publication but not yet released should be listed as 'in press'. Unpublished theses or dissertations must include the department and university in which they were accepted. Unpublished documents may only be cited if they are deposited in a permanent repository at which copies are accessible; such unpublished works must include the manuscript number and the location of the repository. Newspapers are not normally included in the 'References' section; the complete name (including *The* if it is officially part of the name) and date of newspaper, with the city of publication if it is not part of the name, should be cited in the text (*The New York Herald*; 16 September 1872; *The World* (New York); 20 August 1905).

Titles in languages that do not use the Roman alphabet but can be transliterated (such as Russian) should appear in the transliterated version followed by the title in English in square brackets.

The following are offered as guidance:

1. BUTLER, R.M. and MOKRYS, I.J., Solvent Analogue Model of Steam-Assisted Gravity Drainage; *AOSTRA Journal of Research*, Vol. 5, No. 1, pp. 17-32, 1989.
2. BUTLER, R.M., Thermal Recovery of Oil and Bitumen; Prentice Hall (Toronto), p. 496, 1991.
3. JIANG, Q., Recovery of Heavy Oil and Bitumen Using VAPEX Process in Homogeneous and Heterogeneous Reservoirs; *Ph.D. Dissertation, Department of Chemical & Petroleum Engineering, University of Calgary, Calgary, AB, 1997.*

Some references do not fit readily into these forms. In these cases, the author must give all reference data in full, so that the Editor can rule on the form to be used. URL citations to peer-reviewed articles are acceptable; in general, other URL citations should be avoided because they may be transitory in nature. In cases in which this is unavoidable, the date when the site was last accessed should be given. A more detailed style sheet for references is available from the Editor.
